

Or c -ro na on. zer. $\Rightarrow a+b=c+h$

Or $\triangle CMB \Rightarrow \frac{h}{c} = \sin \alpha \Rightarrow h = c \sin \alpha$

$\Rightarrow a+b = c + c \sin \alpha = c(1 + \sin \alpha)$

$$S = \frac{(a+b)h}{2} = \frac{c(1+\sin \alpha) \cdot c \sin \alpha}{2} = \frac{c^2 \sin \alpha (1+\sin \alpha)}{2}$$

$$\Rightarrow \frac{c^2 \sin \alpha (1+\sin \alpha)}{2} = 16 \Rightarrow c^2 = \frac{32}{\sin \alpha (1+\sin \alpha)}$$

$$\Rightarrow h = \sqrt{\frac{32}{\sin \alpha (1+\sin \alpha)}} \cdot \sin \alpha = \frac{4\sqrt{2 \sin^2 \alpha}}{\sqrt{\sin \alpha (1+\sin \alpha)}}$$

$$z = \frac{4\sqrt{2 \sin \alpha}}{\sqrt{1+\sin \alpha}}$$

$$S_{\text{circle}} = \pi z^2 = \frac{16\pi \cdot 2 \sin \alpha}{1+\sin \alpha} = \frac{32\pi \sin \alpha}{1+\sin \alpha}$$
